About Landscape design

This article **needs additional citations for verification**. Please help **improve this article** by **adding citations to reliable sources**. Unsourced material may be challenged and removed.

Find sources: "Landscape design" – news · newspapers · books · scholar · JSTOR (May 2016) (Learn how and when to remove this message)

Central Park in **Manhattan**, the first landscaped **urban park** in the United States

Landscape design is an independent profession and a design and art tradition, practiced by landscape designers, combining **nature** and **culture**. In contemporary practice, landscape design bridges the space between **landscape architecture** and **garden design**.^[1]

Design scope

[[edit](#)]

Landscape design focuses on both the integrated master **landscape planning** of a property and the specific **garden design** of landscape elements and plants within it. The practical, **aesthetic**, **horticultural**, and environmental **sustainability** are also components of landscape design, which is often divided into **hardscape** design and **softscape** design. Landscape designers often collaborate with related disciplines such as **architecture**, **civil engineering**, **surveying**, **landscape contracting**, and artisan specialties.

Design projects may involve two different professional roles: landscape design and landscape architecture.

- Landscape design typically involves artistic composition and artisanship, horticultural finesse and expertise, and emphasis on detailed site involvement from conceptual stages through to final construction.
- Landscape architecture focuses more on urban planning, city and regional parks, civic and corporate landscapes, large scale interdisciplinary projects, and delegation to contractors after completing designs.

There can be a significant overlap of talent and skill between the two roles, depending on the education, licensing, and experience of the professional. Both landscape designers and landscape architects practice landscape design.^[2]

Design approach

[[edit](#)]

Autumn colours at [Stourhead](#) gardens

The landscape design phase consists of research, gathering ideas, and setting a plan. Design factors include objective qualities such as: climate and microclimates; topography and orientation, site drainage and [groundwater recharge](#); municipal and resource building codes; soils and irrigation; human and vehicular access and circulation; recreational amenities (i.e., sports and water); furnishings and lighting; [native plant](#) habitat botany when present; property safety and security; [construction detailing](#); and other measurable considerations.

Design factors also include subjective qualities such as [genius loci](#) (the special site qualities to emphasize); client's needs and preferences; desirable plants and elements to retain on site, modify, or replace, and that may be available for [borrowed scenery](#) from beyond; artistic composition from perspectives of both looking upon and observing from within; spatial development and definition – using lines, sense of scale, and balance and symmetry; plant palettes; and artistic [focal points](#) for enjoyment. There are innumerable other design factors and considerations brought to the complex process of designing a garden that is beautiful, well-functioning, and that thrives over time.

The up-and-coming practice of online landscape design allows professional landscapers to remotely design and plan sites through manipulation of two-dimensional images without ever physically visiting the location. Due to the frequent lack of non-visual, supplementary data such as soil assessments and pH tests, online landscaping necessarily must focus on incorporating only plants which are tolerant across many diverse soil conditions.

Training

[[edit](#)]

André Le Nôtre

Historically, landscape designers trained by apprenticing—such as **André Le Nôtre**, who apprenticed with his father before designing the **Gardens of Versailles**—to accomplished masters in the field, with the titular name varying and reputation paramount for a career. The professional section of garden designers in Europe and the Americas went by the name "Landscape Gardener". In the 1890s, the distinct classification of **landscape architect** was created, with educational and licensing test requirements for using the title legally. **Beatrix Farrand**, the sole woman in the founding group, refused the title preferring Landscape Gardener. Matching the client and technical needs of a project, and the appropriate practitioner with talent, legal qualifications, and experienced skills, surmounts title nomenclature.^[*citation needed*]

Institutional education in landscape design appeared in the early 20th century. Over time it became available at various levels. Ornamental horticulture programs with design components are offered at community college and universities within **schools of agriculture** or horticulture, with some beginning to offer garden or landscape design certificates and degrees. Departments of landscape architecture are located within university schools of architecture or **environmental design**, with undergraduate and graduate degrees offered. Specialties and minors are available in horticultural botany, **horticulture**, **natural resources**, **landscape engineering**, **construction management**, **fine and applied arts**, and **landscape design history**. Traditionally, hand-drawn drawings documented the design and position of features for construction, but **Landscape design software** is frequently used now.^[*citation needed*]

Other routes of training are through informal apprenticeships with practicing landscape designers, landscape architects, landscape contractors, gardeners, nurseries and garden centers, and docent programs at botanical and public gardens. Since the landscape designer title does not have a college degree or licensing requirements to be used, there is a very wide range of sophistication, aesthetic talent, technical expertise, and specialty strengths to be responsibly matched with specific client and project requirements.^[*citation needed*]

Gardening

[*edit*]

Many landscape designers have an interest and involvement with **gardening**, personally or professionally. Gardens are dynamic and not static after construction and planting are completed, and so in some ways are "never done". Involvement with **landscape management** and direction of the ongoing garden direction, evolution, and care depend on the professional's and client's needs and inclinations. As with the other interrelated landscape disciplines, there can be an overlap of services offered under the titles of landscape designer or professional gardener.^[2]

About backyard

For other uses, see Backyard (disambiguation).

Look up ***backyard*** or ***back yard*** in Wiktionary, the free dictionary.

The examples and perspective in this article **may not represent a worldwide view of the subject**. You may improve this article, discuss the issue on the talk page, or create a new article, as appropriate. *(January 2025)* (*Learn how and when to remove this message*)

Globe icon.

Image not found or type unknown

A back yard in Brisbane, Queensland, Australia, in 1929

The back garden of lford Manor was designed by Harold Peto.

A **backyard**, or **back yard** (known in the United Kingdom as a **back garden** or just **garden**), is a **yard** at the back of a **house**, common in suburban developments in the Western world.^[1]

It is typically **residential garden** located at the rear of a property, on the other side of the **house** from the **front yard**. While Western gardens are almost universally based on plants, the "garden" (which etymologically may imply a shorthand of **botanical garden**) may use plants sparsely or not at all. Hence, the terms *yard* and *garden* are for the context of this article interchangeable in most cases.

History

[[edit](#)]

United Kingdom

[[edit](#)]

In English **suburban** and **gardening** culture, back gardens have a special place.[2] In **Britain** there are over 10 million back gardens.[3] British planning require minimum distances between the rear faces of adjacent dwellings and so there is usually space for a back garden of some sort. In other countries, such as Australia, this does not apply and preference for buildings with a large footprint has tended to squeeze out the space at the rear.[4]

Australia

[[edit](#)]

In Australia, until the mid-20th century, the back yard of a property would traditionally contain a **fowl run**, outhouse ("**dunny**"), **vegetable patch**, and **woodheap**. More recently, these have been replaced by outdoor entertainments such as a **barbecue** and **swimming pool**.^[5] But, since the 1990s, the trend in Australian suburban development has been for back yards to disappear as the dwellings now occupy almost all of the building plot.^[1]

In higher latitudes, it is economical in low **land value** regions to use open land surrounding a house for **vegetable gardening** during summers and allow sunlight to enter house windows from a low horizon angle during winters. As land value increases, houses are built nearer to each other. In order to preserve some of the open land, house owners may choose to allow construction on the side land of their houses, but not build in front of or behind their house in order to preserve some remnants of open surrounding land. The back area is known as the backyard or **back garden**.

Overview

[[edit](#)]

A back garden arises when the main building divides the surrounding gardens into two. This happens especially in the high density housing of British cities and towns. A **semi-detached house** typical of the British suburbs of the 20th century will have front gardens which face the road and provide access. The back gardens in such cases will be more secluded and access will typically be via the dwelling or by a path around the side. A front garden is a formal and semi-public space and so subject to the constraints of convention and law. However, the back garden is more private and

casual,[6] and so can be put to more purposes.

If the housing is **terraced**, then no side path is possible and access may be provided by an alley which runs behind the rear of the terrace. While buildings opening directly onto a street may not have a front garden, most will have some space at the back, however small; the exception being **back-to-back houses** found in northern industrial towns in England such as **Leeds**, but now mostly demolished. A private back yard with a "privy" (toilet) was a defining feature of the **byelaw terraced house**, a type of dwelling built to comply with the **Public Health Act 1875**.

Usage

[edit]

Because of weather constraints, it is usual to use a garden more in the summer than in the winter, although some usages are traditional, such as for a bonfire on **Bonfire Night**, 5 November. Similarly, **daytime** usage is more common than nighttime.

The back garden of the **archdeacon of Canterbury** contains a **mulberry** which is said to have been planted by **Erasmus**.

Functionally, it may be used for:

- Growing food[3]
- Playing games
- Relaxing and **sunbathing**
- Raising plants
- Housing pets
- Drying clothes
- Making a **compost heap**
- Hobbies
- Locating a **greenhouse**, **conservatory**, **shed**, **workshop**, **outhouse**, or **garage** (if access to a **road** is possible)
- **Partying**
- **Wildlife refuge**
- Safe area for children
- Location of an **air raid shelter** such as the **Anderson shelter** of World War II[7]

In fact, its functional and **recreational** use is so varied, that it cannot be easily categorised. Many of the freedoms of the use of the back garden come from the restrictions, social or legal of what are not done in the front.

Usually, clothes are not dried, vegetables are not grown, and sunbathing is not carried out in a front garden. All these can happen in the privacy of the back garden.

Traditionally, people treat a back garden as private to themselves, and not those they are neighbours to. The social etiquette of how one can greet and interact one's neighbours may be complex and defined by many informal social rules.

In some areas, talking to one's neighbours over the back wall (the side wall following the property boundary line) is usual, and is a welcome form of neighbourliness, while in other places it is not.

About landscape architecture

Stourhead in Wiltshire, England, designed by Henry Hoare (1705–1785), "the first landscape gardener, who showed in a single work, genius of the highest order"^[1]

Landscape architecture is the design of outdoor areas, landmarks, and structures to achieve environmental, social-behavioural, or aesthetic outcomes.[2] It involves the systematic design and general engineering of various structures for construction and human use, investigation of existing social, ecological, and soil conditions and processes in the landscape, and the design of other interventions that will produce desired outcomes.

The scope of the profession is broad and can be subdivided into several sub-categories including professional or licensed landscape architects who are regulated by governmental agencies and possess the expertise to design a wide range of structures and landforms for human use; **landscape design** which is not a licensed profession; **site planning**; **stormwater management**; **erosion control**; **environmental restoration**; public realm, parks, recreation and **urban planning**; visual resource management; green infrastructure planning and provision; and private estate and residence landscape master planning and design; all at varying scales of design, planning and management. A practitioner in the profession of landscape architecture may be called a **landscape architect**; however, in jurisdictions where professional licenses are required it is often only those who possess a landscape architect license who can be called a landscape architect.

Definition of landscape architecture

[\[edit\]](#)

A canal design focused on esthetical landscape architecture in **Stockholm**, Sweden.

A river with concrete walls like those of a **flood control channel**, a historic flood-control measure using **landscape engineering** in **Houston**, Texas. Such channelling, intended to be strictly functional, may make flooding worse, by speeding the flow instead of spreading the pulse of floodwater.
[3][4][5]

Modern landscape architecture is a multi-disciplinary field, incorporating aspects of [urban design](#), [architecture](#), [geography](#), [ecology](#), [civil engineering](#), [structural engineering](#), [horticulture](#), [environmental psychology](#), [industrial design](#), [soil sciences](#), [botany](#), and [fine arts](#). The activities of a landscape architect can range from the creation of public parks and parkways to site planning for campuses and corporate office parks; from the design of residential estates to the design of civil [infrastructure](#); and from the management of large [wilderness](#) areas to [reclamation](#) of degraded landscapes such as mines or [landfills](#). Landscape architects work on structures and external spaces in the landscape aspect of the design – large or small, [urban](#), [suburban](#) and [rural](#), and with "hard" (built) and "soft" (planted) materials, while integrating ecological [sustainability](#).

The most valuable contribution can be made at the first stage of a project to generate ideas with technical understanding and creative flair for the design, organization, and use of spaces. The landscape architect can conceive the overall concept and prepare the master plan, from which detailed design drawings and technical specifications are prepared. They can also review proposals to authorize and supervise contracts for the construction work. Other skills include preparing design impact assessments, conducting environmental assessments and audits, and serving as an expert witness at inquiries on [land use](#) issues. The majority of their time will most likely be spent inside an office building designing and preparing models for clients.^{[citation needed](#)}

History

[\[edit\]](#)

Orangery at the Palace of Versailles, outside Paris

Main article: [History of landscape architecture](#)

For the period before 1800, the history of landscape gardening (later called landscape architecture) is largely that of master planning and [garden design](#) for [manor houses](#), [palaces](#) and royal properties. An example is the extensive work by [André Le Nôtre](#) for King [Louis XIV of France](#) on the [Gardens of Versailles](#). The first person to write of *making* a landscape was [Joseph Addison](#) in 1712. The term landscape architecture was invented by [Gilbert Laing Meason](#) in 1828, and [John Claudius Loudon](#) (1783–1843) was instrumental in the adoption of the term landscape architecture by the modern profession. He took up the term from Meason and gave it publicity in his Encyclopedias and in his 1840 book on the *Landscape Gardening and Landscape Architecture of the Late Humphry Repton*.^{[\[6\]](#)}

John Claudius Loudon was an established and influential horticultural journalist and Scottish landscape architect whose writings were instrumental in shaping Victorian taste in gardens, public parks, and architecture.[7] In the *Landscape Gardening and Landscape Architecture of the Late Humphry Repton*, Loudon describes two distinct styles of landscape gardening existing at the beginning of the 19th century: geometric and natural.[6] Loudon wrote that each style reflected a different stage of society. The geometric style was “most striking and pleasing,” displaying wealth and taste in an “early state of society” and in “countries where the general scenery was wild, irregular, and natural, and man, comparatively, uncultivated and unrefined.”[6] The natural style was used in “modern times” and in countries where “society is in a higher state of cultivation,” displaying wealth and taste through the sacrifice of profitable lands to make room for such designs. [6]

The prominent English landscape designer Humphry Repton (1752-1818) echoed similar ideas in his work and design ideas. In his writings on the use of delineated spaces (e.g. courtyards, terrace walls, fences), Repton states that while the motive for defense no longer exists, the features are still useful in separating "the gardens, which belong to man, and the forest, or desert, which belongs to the wild denizens." [6] Repton refers to Indigenous peoples as "uncivilized human beings, against whom some decided line of defense was absolutely necessary." [6]

The practice of landscape architecture spread from the Old to the New World. The term "landscape architect" was used as a professional title by Frederick Law Olmsted in the United States in 1863 citation 1 and Andrew Jackson Downing, another early American landscape designer, was editor of *The Horticulturist* magazine (1846–52). In 1841 his first book, *A Treatise on the Theory and Practice of Landscape Gardening, Adapted to North America*, was published to a great success; it was the first book of its kind published in the United States.[8] During the latter 19th century, the term landscape architect began to be used by professional landscapes designers, and was firmly established after Frederick Law Olmsted Jr. and Beatrix Jones (later Farrand) with others founded the American Society of Landscape Architects (ASLA) in 1899. IFLA was founded at Cambridge, England, in 1948 with Sir Geoffrey Jellicoe as its first president, representing 15 countries from Europe and North America. Later, in 1978, IFLA's Headquarters were established in Versailles.[9][10][11]

Fields of activity

[edit]

Royal Botanic Gardens, Kew, London, established 1759

The Palm House, Kew, built 1844–1848 by Richard Turner to Decimus Burton's designs

Urban design in city squares. Water feature in London, by Tadao Ando who also works with landscapes and gardens

The variety of the professional tasks that landscape architects collaborate on is very broad, but some examples of project types include:[12]

- Parks of general design and public infrastructure
- Sustainable development
- Stormwater management including rain gardens, green roofs, groundwater recharge, green infrastructure, and constructed wetlands.
- Landscape design for educational function and site design for public institutions and government facilities
- Parks, botanical gardens, arboreturns, greenways, and nature preserves
- Recreation facilities, such as playgrounds, golf courses, theme parks and sports facilities
- Housing areas, industrial parks and commercial developments
- Estate and residence landscape planning and design
- Landscaping and accents on highways, transportation structures, bridges, and transit corridors
- Contributions to urban design, town and city squares, waterfronts, pedestrian schemes
- Natural park, tourist destination, and recreating historical landscapes, and historic garden appraisal and conservation studies
- Reservoirs, dams, power stations, reclamation of extractive industry applications or major industrial projects and mitigation
- Environmental assessment and landscape assessment, planning advice and land management proposals.
- Coastal and offshore developments and mitigation
- Ecological design (any aspect of design that minimizes environmentally destructive impacts by integrating itself with natural processes and sustainability)

Landscape managers use their knowledge of landscape processes to advise on the long-term care and development of the landscape. They often work in forestry, nature conservation and agriculture .[citation needed]

Landscape scientists have specialist skills such as soil science, hydrology, geomorphology or botany that they relate to the practical problems of landscape work. Their projects can range from site surveys to the ecological assessment of broad areas for planning or management purposes. They may also report on the impact of development or the importance of particular species in a given area.[citation needed]

Landscape planners are concerned with landscape planning for the location, scenic, ecological and recreational aspects of urban, rural, and coastal land use. Their work is embodied in written statements of policy and strategy, and their remit includes master planning for new developments, landscape evaluations and assessments, and preparing countryside management or policy plans. Some may also apply an additional specialism such as landscape archaeology or law to the process of landscape planning.[citation needed]

Green roof (or more specifically, vegetative roof) designers design extensive and intensive roof gardens for stormwater management, evapo-transpirative cooling, sustainable architecture, aesthetics, and habitat creation.[13]

Relation to urban planning

[edit]

The combination of the traditional landscape gardening and the emerging city planning combined gave landscape architecture its unique focus. Frederick Law Olmsted used the term 'landscape architecture' using the word as a profession for the first time when designing the Central Park.

Through the 19th century, urban planning became a focal point and central issue in cities. The combination of the tradition of landscape gardening and the emerging field of urban planning offered landscape architecture an opportunity to serve these needs.[14] In the second half of the century, Frederick Law Olmsted completed a series of parks that continue to have a significant influence on the practices of landscape architecture today. Among these were Central Park in New York City, Prospect Park in Brooklyn, New York and Boston's Emerald Necklace park system. Jens Jensen designed sophisticated and naturalistic urban and regional parks for Chicago, Illinois, and private estates for the Ford family including Fair Lane and Gaukler Point. One of the original eleven founding members of the American Society of Landscape Architects (ASLA), and the only woman, was Beatrix Farrand. She was design consultant for over a dozen universities including: Princeton in Princeton, New Jersey; Yale in New Haven, Connecticut; and the Arnold Arboretum for Harvard in Boston, Massachusetts. Her numerous private estate projects include the landmark Dumbarton Oaks in the Georgetown neighborhood of Washington, D.C.[15] Since that time, other architects – most notably Ruth Havey and Alden Hopkins – changed certain elements of the Farrand design.[citation needed]

Since this period urban planning has developed into a separate independent profession that has incorporated important contributions from other fields such as civil engineering, architecture and public administration. Urban Planners are qualified to perform tasks independent of landscape architects, and in general, the curriculum of landscape architecture programs do not prepare students to become urban planners.[16]

Landscape architecture continues to develop as a design discipline and to respond to the various movements in architecture and design throughout the 20th and 21st centuries. Thomas Church was a mid-century landscape architect significant in the profession. Roberto Burle Marx in Brazil combined the International style and native Brazilian plants and culture for a new aesthetic. Innovation continues today solving challenging problems with contemporary design solutions for master planning, landscapes, and gardens.[citation needed]

Ian McHarg was known for introducing environmental concerns in landscape architecture.[17][18] He popularized a system of analyzing the layers of a site in order to compile a complete understanding of the qualitative attributes of a place. This system became the foundation of today's Geographic Information Systems (GIS). McHarg would give every qualitative aspect of the site a layer, such as the history, hydrology, topography, vegetation, etc. GIS software is ubiquitously used in the landscape architecture profession today to analyze materials in and on the Earth's surface and is similarly used by urban planners, geographers, forestry and natural resources professionals, etc.[citation needed]

European nations enabled the widespread circulation of urban planning strategies by transferring landscaping ideas and practices to overseas colonies. The green belt was a popular landscape practice exported by Britain onto colonial territories such as Haifa (1918-1948).[19] Spatial mechanisms like the green belt, implemented through the Haifa Bay Plan and the British "Grand Model," were used to enforce political control and civic order and extend western ideas of progress and development.[19] The Greater London Regional Planning Committee accepted the green belt concept which formed the basis of the 1938 Green Belt Act. The planning prototype demarcated open spaces, distinguished between city and countryside, limited urban growth, and created zoning divisions.[19] It was used extensively in the British colonies to facilitate British rule through the organized division of landscape and populations. [19]

Relation to Indigenous practices

[edit]

Indigenous land management practices create constantly changing landscapes through the use of vegetation and natural systems, contrasting with western epistemologies of the discipline that separate ornament from function.[20] The discipline of landscape architecture favors western designs made from structured materials and geometric forms.[20] Landscape architecture history books tend to include projects that contain constructed architectural elements that persist over time, excluding many Indigenous landscape-based designs.[20]

Landscape architecture textbooks often place Indigenous peoples as a prefix to the official start of the discipline. The widely read landscape history text *The Landscape of Man* (1964) offers a global history of the designed landscape from past to present, featuring African and other Indigenous peoples in its discussions of Paleolithic man between 500,000 and 8,000 BCE in relation to human migration.[20] Indigenous land-management practices are described as archaeological rather than a part of contemporary practice. *Gardens in Time* (1980) also places Indigenous practice as prehistory at the beginning of the landscape architecture timeline. Authors John and Ray Oldham describe Aborigines of Australia as “survivors of an ancient way of life” who provide an opportunity to examine western Australia as a “meeting place of a prehistoric man.”[20]

In the late 18th century, the landscapes created by aboriginal land and fire management practices appealed to English settlers in Australia.[20] Journals from the period of early white settlement note the landscape resembling parks and popular designs in English landscape gardens of the same period.[20] In England, these designs were considered sophisticated and celebrated for the intentional sacrifice of usable land. In Australia, the park-like condition was used to justify British

control, citing its emptiness and lack of productive use as a basis for the dispossession of Aboriginal people. [20]

Education

[edit]

Landscape Architects are generally required to have university or graduate education from an accredited landscape architecture degree program, which can vary in length and degree title. They learn how to create projects from scratch, such as **residential** or **commercial** planting and designing outdoor living spaces[21] they are willing to work with others to get a better outcome for the customers when doing a project; they will have to learn the basics of how to create a project on a manner of time and will require to get your license in a certain state to be allowed to work; students of Landscape Architects will learn how to interact with clients and will learn how to explain a design from scratch when giving the final project.[22]

Landscape architecture has been taught in the **University of Manchester** since the 1950s. The course in the **Manchester School of Architecture** enables students to gain various bachelor's and master's degrees, including MLPM(Hons) which is accredited by the **Landscape Institute** and by the **Royal Town Planning Institute**. [23]

Profession

[edit]

Main article: **Landscape architect**

In many countries, a professional **institute**, comprising members of the professional community, exists in order to protect the standing of the profession and promote its interests, and sometimes also regulate the practice of landscape architecture. The standard and strength of legal regulations governing landscape architecture practice varies from nation to nation, with some requiring licensure in order to practice; and some having little or no regulation. In **Europe**, **North America**, parts of **South America**, **Australia**, **India**, and **New Zealand**, landscape architecture is a regulated profession.[24]

Argentina

[edit]

Since 1889, with the arrival of the French architect and urbanist landscaper **Carlos Thays**, recommended to recreate the National Capital's parks and public gardens, it was consolidated an apprentice and training program in landscaping that eventually became a regulated profession, currently the leading academic institution is the **UBA University of Buenos Aires** "*UBA Facultad de Arquitectura, Diseño y Urbanismo*" (Faculty of Architecture, Design and Urbanism) offering a Bachelor's degree in Urban Landscaping Design and Planning, the profession itself is regulated by the National Ministry of Urban Planning of Argentina and the Institute of the **Buenos Aires Botanical Garden**.^[***citation needed***]

Australia

[\[edit\]](#)

The [Australian Institute of Landscape Architects](#) (AILA) provides accreditation of university degrees and non-statutory professional registration for landscape architects. Once recognized by AILA, landscape architects use the title 'Registered Landscape Architect' across the six states and territories within Australia.^{[\[citation needed\]](#)}

AILA's system of professional recognition is a national system overseen by the AILA National Office in Canberra. To apply for AILA Registration, an applicant usually needs to satisfy a number of pre-requisites, including university qualification, a minimum number years of practice and a record of professional experience.^{[\[25\]](#)}

Landscape Architecture within Australia covers a broad spectrum of planning, design, management, and research. From specialist design services for government and private sector developments through to specialist professional advice as an expert witness.^{[\[citation needed\]](#)}

Canada

[\[edit\]](#)

In Canada, landscape architecture, like law and medicine, is a self-regulating profession pursuant to provincial statute. For example, Ontario's profession is governed by the Ontario Association of Landscape Architects pursuant to the *Ontario Association of Landscape Architects Act*. Landscape architects in Ontario, British Columbia, and Alberta must complete the specified components of L.A.R.E (Landscape Architecture Registration Examination) as a prerequisite to full professional standing.

Provincial regulatory bodies are members of a national organization, the [Canadian Society of Landscape Architects / L'Association des Architectes Paysagistes du Canada](#) (CSLA-AAPC), and individual membership in the CSLA-AAPC is obtained through joining one of the provincial or territorial components.^{[\[26\]](#)}

Indonesia

[\[edit\]](#)

ISLA (Indonesia Society of Landscape Architects) is the Indonesian society for professional landscape architects formed on 4 February 1978 and is a member of IFLA APR and IFLA World. The main aim is to increase the dignity of the professional members of landscape architects by increasing their activity role in community service, national and international development. The management of IALI consists of National Administrators who are supported by 20 Regional Administrators (Provincial level) and 3 Branch Managers at city level throughout Indonesia.^{[\[citation needed\]](#)}

Landscape architecture education in Indonesia was held in 18 universities, which graduated D3, Bachelor and Magister graduates. The landscape architecture education incorporate in Association of Indonesian Landscape Architecture Education.^[*citation needed*]

Italy

[*edit*]

AIAPP (Associazione Italiana Architettura del Paesaggio) is the Italian association of professional landscape architects formed in 1950 and is a member of IFLA and IFLA Europe (formerly known as EFLA). AIAPP is in the process of contesting this new law which has given the Architects' Association the new title of Architects, Landscape Architects, Planners and Conservationists whether or not they have had any training or experience in any of these fields other than Architecture. In Italy, there are several different professions involved in landscape architecture:

- Architects
- Landscape designers
- Doctor landscape agronomists and Doctor landscape foresters, often called Landscape agronomists.
- Agrarian Experts and Graduated Agrarian experts.

New Zealand

[*edit*]

The *New Zealand Institute of Landscape Architects* (NZILA) is the professional body for Landscape Architects in NZ.^[*27*]

In April 2013, NZILA jointly with AILA, hosted the 50th International Federation of Landscape Architects (IFLA) World Congress in Auckland, New Zealand. The World Congress is an international conference where Landscape Architects from all around the globe meet to share ideas around a particular topic.^[*citation needed*]

Within NZ, Members of NZILA when they achieve their professional standing, can use the title Registered Landscape Architect NZILA.^[*citation needed*]

NZILA provides an education policy and an accreditation process to review education programme providers; currently there are three accredited undergraduate Landscape Architecture programmes in New Zealand. Lincoln University also has an accredited masters programme in landscape architecture.^[*citation needed*]

Norway

[[edit](#)]

Landscape architecture in Norway was established in 1919 at the Norwegian University of Life Sciences (NMBU) at Ås. The Norwegian School of Landscape Architecture at the Faculty of Landscape and Society is responsible for Europe's oldest landscape architecture education on an academic level. The departments areas include design and design of cities and places, garden art history, landscape engineering, greenery, zone planning, site development, place making and place keeping.^{[[citation needed](#)]}

South Africa

[[edit](#)]

In May 1962, [Joane Pim](#), Ann Sutton, Peter Leutscher and Roelf Botha (considered the forefathers of the profession in South Africa) established the Institute for Landscape Architects, now known as the Institute for Landscape Architecture in South Africa (ILASA).^{[[28](#)]} ILASA is a voluntary organisation registered with the South African Council for the Landscape Architectural Profession (SACLAP).^{[[29](#)]} It consists of three regional bodies, namely, Gauteng, KwaZulu-Natal and the Western Cape. ILASA's mission is to advance the profession of landscape architecture and uphold high standards of professional service to its members, and to represent the profession of landscape architecture in any matter which may affect the interests of the members of the institute. ILASA holds the country's membership with The [International Federation of Landscape Architects](#) (IFLA).^{[[30](#)]}

In South Africa, the profession is regulated by SACLAP, established as a statutory council in terms of Section 2 of the South African Council for the Landscape Architectural Profession Act – Act 45 of 2000. The Council evolved out of the Board of Control for Landscape Architects (BOCLASA), which functioned under the Council of Architects in terms of The Architectural Act, Act 73 of 1970. SACLAP's mission is to establish, direct, sustain and ensure a high level of professional responsibilities and ethical conduct within the art and science of landscape architecture with honesty, dignity and integrity in the broad interest of public health, safety and welfare of the community.^{[[citation needed](#)]}

After completion of an accredited under-graduate and/or post-graduate qualification in landscape architecture at either the [University of Cape Town](#) or the [University of Pretoria](#), or landscape technology at the [Cape Peninsula University of Technology](#), professional registration is attained via a mandatory mentored candidacy period (minimum of two years) and sitting of the professional registration exam. After successfully completing the exam, the individual is entitled to the status of Professional Landscape Architect or Professional Landscape Technologist.^{[[citation needed](#)]}

Sweden

[[edit](#)]

Architects Sweden, Sveriges Arkitekter, is the collective trade union and professional organisation for all architects, including landscape architects, in Sweden. The professional body is a member of IFLA ([International Federation of Landscape Architects](#)) as well as IFLA Europe.

As a landscape architect, anyone can become a member of Architects Sweden if they have a national or international university degree that is approved by the association. If the degree is from within the European Union, Architects Sweden approves Landscape architect educations listed by [IFLA Europe](#). For educations outside the EU, the association makes an assessment on a statement from the [Swedish Council for Higher Education](#) (UHR).

United Kingdom

[\[edit\]](#)

The UK's professional body is the [Landscape Institute](#) (LI). It is a [chartered](#) body that accredits landscape professionals and university courses. At present there are fifteen accredited programmes in the UK. Membership of the LI is available to students, academics and professionals, and there are over 3,000 professionally qualified members.[\[citation needed\]](#)

The Institute provides services to assist members including support and promotion of the work of landscape architects; information and guidance to the public and industry about the specific expertise offered by those in the profession; and training and educational advice to students and professionals looking to build upon their experience.[\[citation needed\]](#)

In 2008, the LI launched a major recruitment drive entitled "I want to be a Landscape Architect" to encourage the study of Landscape Architecture. The campaign aimed to raise the profile of landscape architecture and highlight its valuable role in building [sustainable communities](#) and fighting [climate change](#).[\[31\]](#)

As of July 2018, the "I want to be a Landscape Architect" initiative was replaced by a brand new careers campaign entitled [#ChooseLandscape](#), which aims to raise awareness of landscape as a profession; improve and increase access to landscape education; and inspire young people to choose landscape as a career.[\[32\]](#) This new campaign includes other landscape-related professions such as landscape management, landscape planning, landscape science and urban design.[\[33\]](#)

United States

[\[edit\]](#)

The **National Mall** in **Washington, D.C.** includes many examples of landscape architecture based on historical memorials and monuments.

In the United States, landscape architecture is regulated by individual state governments. For a landscape architect, obtaining licensure requires advanced education and work experience, plus passage of the national examination called the Landscape Architect Registration Examination (L.A.R.E.). Licensing is overseen at the national level by the Council of Landscape Architectural Registration Boards (CLARB). Several states require passage of a state exam as well.

Landscape architecture has been identified as an above-average growth profession by the US Bureau of Labor Statistics and was listed in *U.S. News & World Report's* list of Best Jobs to Have in 2006, 2007, 2008, 2009 and 2010.^[34] The national trade association for United States landscape architects is the **American Society of Landscape Architects**. **Frederick Law Olmsted**, who designed Central Park in New York City, is known as the "father of American landscape architecture".^[35]

Reviews for Rock N Block - Turf N Hardscapes

Terry lewis

(5)

Workers were great, no problem they did what was required, but the representative of your company mislead me on what was to be done, I showed pictures from a competitor landscaper, representative stated he could bet there , , . price, but since it wasn't in contract, I was left with uncomplicated backyard , working with owner at present, so he's been outstanding working on this situation, as amount of rock was way off and the owner did increase the amount substantially to finish the front yard. another landscaper under contract to finish the backyard. Would like to add a comment the manger/owner of Las Vegas yard n block stands behind his words and helped me tremendously on finishing up the backyard,

Reviews for Rock N Block - Turf N Hardscapes

D. Lopez

(5)

We recently had a very positive experience with Rock N Block for our fence replacement. The entire process went smoothly and exceeded our expectations. Harvey and his team were incredibly professional and communicative throughout the project providing much-needed assurance and peace of mind. The crew was punctual and maintained a diligent and respectful attitude that made the experience pleasant. The crew finished the project ahead of schedule, and the quality of their work is impressive; our new wall looks great! We recommend Rock N Block for any fencing needs and look forward to working with them again. Thank you, Harvey and crew, for a job well done!

Eric and team did an amazing job. They worked with me for months while I got HOA approval for the project. Once they began working they were great, going over everything in detail and making sure things were perfect. This project included wall repair, stucco and paint repair, paver and turf installation. Extremely satisfied with this experience.

Frequently Asked Questions

Is artificial turf pet-friendly?

Yes, their artificial turf is designed to be safe and comfortable for pets, offering durability and easy maintenance.

Does Rock N Block offer warranties on their products and services?

Yes, they offer warranties. Detailed information can be found on their website.

Can artificial turf handle snow and ice?

Yes, artificial turf can withstand snow and ice. It's recommended to use a soft rake or brush to remove snow without damaging the turf.
