About swimming pool

For other uses, see [Swimming pool \(disambiguation\)](#).

Backyard swimming pool

Olympic-size swimming pool and starting blocks at Melbourne Sports and Aquatic Centre used for the 2006 Commonwealth Games in Melbourne, Australia

A **swimming pool**, **swimming bath**, **wading pool**, **paddling pool**, or simply **pool**, is a structure designed to hold water to enable **swimming** and associated activities. Pools can be built into the ground (in-ground pools) or built above ground (as a freestanding construction or as part of a building or other larger structure), and may be found as a feature aboard ships. In-ground pools are most commonly constructed from materials such as **concrete**, natural stone, metal, plastic, composite or **fiberglass**, and may follow a standardized size, the largest of which is the **Olympic-size swimming pool**, or be of a custom shape.

Many **health clubs**, **fitness centers**, and private clubs have pools for their members, often used for exercise. In much of the world, local governments provide publicly-run pools for their citizens. Many of these are outdoors; indoor pools are typically part of a **leisure centre**. Many hotels have a pool for the use of their guests. Pools as a feature in hotels are more common in tourist areas or near **convention centers**. Many universities and other institutional communities provide pools for their members., often as part of an institution-specific athletic or recreational complex. Apartment complexes and residential subdivisions may provide a pool for the use of their residents. Private residences, particularly in areas with warm climates, may have their own pools.

Educational facilities such as high schools and universities often have pools for physical education classes, recreational activities, leisure, and competitive athletics such as swimming teams. **Hot tubs** and **spas** are small heated pools used for **relaxation** or **hydrotherapy**. Specialised pools are also used for **diving**, water sports, and **physical therapy**, as well as for training of **lifeguards** and **astronauts**. Swimming pools most commonly use chlorinated water, or salt water, and may be heated or unheated.

History

[[edit](#)]

See also: [History of water supply and sanitation](#)

Ancient Roman baths in [Bath](#), England

Pre-modern

[[edit](#)]

The "[Great Bath](#)" at the site of [Mohenjo-Daro](#) in modern-day Pakistan was most likely the first swimming pool, dug during the 3rd millennium BC. This pool is 12 by 7 metres (39 by 23 feet), is lined with bricks, and was covered with a tar-based sealant.^[1]

[Ancient Greeks](#) and [Romans](#) built artificial pools for athletic training in the [palaestras](#), for nautical games and for military exercises. Roman emperors had private swimming pools in which fish were also kept, hence one of the [Latin](#) words for a pool was *piscina*. The first heated swimming pool was built by [Gaius Maecenas](#) in [his gardens](#) on the [Esquiline Hill](#) of [Rome](#), likely sometime between 38 and 8 BC.^[2] Gaius Maecenas was a wealthy imperial advisor to [Augustus](#) and considered one of the first patrons of arts.^[3]

Ancient [Sinhalese](#) built a pair of pools called "[Kuttam Pokuna](#)" in the kingdom of [Anuradhapura](#), Sri Lanka, in the 6th century AD. They were decorated with flights of steps, punkalas or pots of abundance, and scroll design.^{[4][5]}

19th and 20th centuries

[[edit](#)]

Swimming pools became popular in Britain in the mid-19th century. As early as 1837, six indoor pools with diving boards existed in London, England.^[6] The Maidstone Swimming Club in [Maidstone](#), [Kent](#) is believed to be the oldest surviving swimming club in Britain. It was formed in 1844, in response to concerns over drownings in the [River Medway](#), especially since would-be rescuers would often drown because they themselves could not swim to safety. The club used to swim in the River Medway, and would hold races, diving competitions and [water polo](#) matches. *The South East Gazette* July 1844 reported an aquatic breakfast party: coffee and biscuits were served on a floating raft in the river. The coffee was kept hot over a fire; club members had to

tread water and drink coffee at the same time. The last swimmers managed to overturn the raft, to the amusement of 150 spectators.[7]

The [Amateur Swimming Association](#) was founded in 1869 in England,[*citation needed*] and the Oxford Swimming Club in 1909.[8] The presence of indoor baths in the cobbled area of [Merton Street](#) might have persuaded the less hardy of the aquatic brigade to join. So, bathers gradually became swimmers, and bathing pools became swimming pools.[*citation needed*] In 1939, [Oxford](#) created its first major public indoor pool at Temple Cowley.

The modern [Olympic Games](#) started in 1896 and included swimming races, after which the popularity of swimming pools began to spread. In the US, the [Racquet Club of Philadelphia](#) clubhouse (1907) boasts one of the world's first modern above-ground swimming pools. The first swimming pool to go to sea on an ocean liner was installed on the [White Star Line's Adriatic](#) in 1906.[9] The oldest known public swimming pool in the U.S., Underwood Pool, is located in [Belmont, Massachusetts](#).[10]

The [Yrjönkatu Swimming Hall](#), the oldest swimming hall in Finland, photographed on its opening day on 4 June 1928 in [Kamppi, Helsinki](#)[11]

Interest in competitive swimming grew following [World War I](#). Standards improved and training became essential. Home swimming pools became popular in the United States after [World War II](#) and the publicity given to swimming sports by Hollywood films such as [Esther Williams' Million Dollar Mermaid](#) made a home pool a desirable status symbol. More than 50 years later, the home or residential swimming pool is a common sight. Some small nations enjoy a thriving swimming pool industry (e.g., New Zealand pop. 4,116,900 – holds the record in pools per capita with 65,000 home swimming pools and 125,000 spa pools).[12]

A two-storey, white concrete swimming pool building composed of horizontal cubic volumes built in 1959 at the [Royal Roads Military College](#) is on the [Canadian Register of Historic Places](#).[13]

World records

[[edit](#)]

Further information: [List of largest swimming pools](#)

Moskva Pool, at one time the largest swimming pool in the world (1980)

According to the **Guinness World Records**, the largest swimming pool in the world is **San Alfonso del Mar** Seawater pool in **Algarrobo, Chile**. It is 1,013 m (3,323 ft) long and has an area of 8 ha (20 acres). At its deepest, it is 3.5 m (11 ft) deep.^[14] It was completed in December 2006.^[15]

The largest indoor **wave pool** in the world is at **DreamWorks Water Park** within the **American Dream** shopping and entertainment complex at the **Meadowlands Sports Complex** in **East Rutherford, New Jersey**, United States, and the largest indoor pool in North America is at the **Neutral Buoyancy Lab** in the **Sonny Carter Training Facility** at **NASA JSC** in Houston.^{[16][17]}

In 2021, **Deep Dive Dubai**, located in Dubai, UAE, was certified by the **Guinness Book of World Records** as the world's deepest swimming pool reaching 60 metres (200 ft).^{[18][19]} The **Y-40** swimming pool at the **Hotel Terme Milpini** in **Padua**, Italy, previously held the record, 42.15 m (138.3 ft), from 2014 until 2021.^[20]

The **Fleishhacker Pool** in San Francisco was the largest heated outdoor swimming pool in the United States. Opened on 23 April 1925, it measured 1,000 by 150 ft (300 by 50 m) and was so large that the lifeguards required **kayaks** for patrol. It was closed in 1971 due to low patronage.^[21]

In Europe, the largest swimming pool opened in 1934 in **Elbląg** (Poland), providing a water area of 33,500 square metres (361,000 sq ft).^[22]

One of the largest swimming pools ever built was reputedly created in **Moscow** after the **Palace of Soviets** remained uncompleted. The foundations of the palace were converted into the **Moskva Pool** open-air swimming pool after the process of **de-Stalinisation**.^[23] However, after the fall of **communism**, **Christ the Saviour Cathedral** was re-built on the site between 1995 and 2000; the cathedral had originally been located there.^[*citation needed*]

The highest swimming pool is believed to be in **Yangbajain** (Tibet, China). This resort is located at 4,200 m (13,800 ft) AMSL and has two indoor swimming pools and one outdoor swimming pool, all filled with water from **hot springs**.^[24]

Dimensions

[[]**edit**]

Further information: **§ Competition pools**

Cairns Lagoon, a public swimming pool in Australia

Rooftop pool in **Manhattan**

Length: Most pools in the world are measured in metres, but in the United States pools are often measured in feet and yards. In the UK most pools are calibrated in metres, but older pools measured in yards still exist. In the US, pools tend to either be 25 yards (**SCY-short course** yards), 25 metres (**SCM-short course metres**) or 50 metres (**LCM - long course meters**). US high schools and the **NCAA** conduct short course (25 yards) competition. There are also many pools 33+1?3 m long, so that 3 lengths = 100 m. This pool dimension is commonly used to accommodate water polo. *[citation needed]*

USA Swimming (USA-S) swims in both metric and non-metric pools. However, the international standard is metres, and world records are only recognized when swum in 50 m pools (or 25 m for short course) but 25-yard pools are very common in the US. In general, the shorter the pool, the faster the time for the same distance, since the swimmer gains speed from pushing off the wall after each turn at the end of the pool.

Width: The width of the pool depends on the number of swimming lanes and the width of each individual lane. In an **Olympic swimming pool** each lane is 2.5 meters wide ^[25] and contains 10 lanes, thus making the pool 25 meters wide.

Depth: The depth of a swimming pool depends on the purpose of the pool, and whether it is open to the public or strictly for private use. If it is a private casual, relaxing pool, it may go from 1.0 to 2.0 m (3.3 to 6.6 ft) deep. If it is a public pool designed for diving, it may slope from 3.0 to 5.5 m (10 to 18 ft) in the deep end. A children's play pool may be from 0.3 to 1.2 m (1 to 4 ft) deep. Most public pools have differing depths to accommodate different swimmer requirements. In many jurisdictions, it is a requirement to show the water depth with clearly marked depths affixed to the pool walls, ^{[26][27]} although this may not be the case for private pools in some jurisdictions. ^[28]

Types

[edit]

A swimming pool on the deck of the *Celebrity Silhouette*

Pools can be either indoors or outdoors. They can be of any size and shape, and inground or above ground. Most pools are permanent fixtures, while others are temporary, collapsible structures.

Private pools

[[edit](#)]

A collapsible above-ground swimming pool

Private pools are usually smaller than public pools, on average 3.7 m × 7.3 m (12 ft × 24 ft) to 6.1 m × 12.2 m (20 ft × 40 ft) whereas public pools usually start at 20 m (66 ft).^{[[citation needed](#)]} Home pools can be permanently built-in, or be assembled above ground and disassembled after summer. Privately owned outdoor pools in backyards or gardens started to proliferate in the 1950s in regions with warm summer climates, particularly in the United States with **desegregation**.^{[[29](#)]} A *plunge pool* is a smaller, permanently installed swimming pool, with a maximum size of approximately 3 m × 6 m (10 ft × 20 ft).^{[[30](#)][[31](#)][[32](#)]}

Construction methods for private pools vary greatly. The main types of in-ground pools are gunite **shotcrete**, concrete, **vinyl**-lined, and one-piece fiberglass shells.

Many countries now have strict **pool fencing** requirements for private swimming pools, which require pool areas to be isolated so that unauthorized children younger than six years cannot enter. Many countries require a similar level of protection for the children residing in or visiting the house, although many pool owners prefer the visual aspect of the pool in close proximity to their living areas, and will not provide this level of protection. There is no consensus between states or countries on the requirements to fence private swimming pools, and in many places they are not required at all, particularly in rural settings.^{[[33](#)]}

Children's pools

[[edit](#)]

"Children's pool" redirects here. For the beach in La Jolla, San Diego, see **Children's Pool Beach**.

Inexpensive temporary **polyvinyl chloride** pools can be bought in supermarkets and taken down after summer. They are used mostly outdoors in yards, are typically shallow, and often their sides are inflated with air to stay rigid. When finished, the water and air can be let out and this type of pool can be folded up for convenient storage. They are regarded in the swimming pool industry as "splasher" pools intended for cooling off and amusing toddlers and children, not for swimming, hence the alternate name of "kiddie" pools.^{**[citation needed]**}

Toys are available for children and other people to play with in pool water. They are often blown up with air so they are soft but still reasonably rugged, and can float in water.

Public pools

[edit]

A hotel swimming pool in Miami

A spa at Hotel Fra Mare in Estonia

Tooting Bec Lido, in South London

Public pools are often part of a larger **leisure center** or recreational complex. These centres often have more than one pool, such as an indoor heated pool, an outdoor (**chlorinated**, **saltwater** or **ozonated**) pool which may be heated or unheated, a shallower children's pool, and a paddling pool for toddlers and infants. There may also be a **sauna** and one or more **hot tubs** or **spa** pools ("**jacuzzis**").

Many upscale hotels and holiday resorts have a swimming pool for use by their guests. If a pool is in a separate building, the building may be called a **natatorium**. The building may sometimes also have facilities for related activities, such as a diving tank. Larger pools sometimes have a **diving board** affixed at one edge above the water.

Many public swimming pools are **rectangles** 25 m or 50 m long, but they can be any size and shape. There are also elaborate pools with **artificial waterfalls**, fountains, **splash pads**, wave machines, varying depths of water, bridges, and island bars.

Children's pool at the SaiGau Swimming Pool

Some swimming facilities have **lockers** for clothing and other belongings. The lockers can require a coin to be inserted in a slot, either as deposit or payment. There are usually showers – sometimes mandatory – before and/or after swimming. There are often also lifeguards to ensure the safety of users.

Wading or paddling pools are shallow bodies of water intended for use by small children, usually in parks. Concrete wading pools come in many shapes, traditionally rectangle, square or circle. Some are filled and drained daily due to lack of a filter system. Staff chlorinate the water to ensure health and safety standards.^[*citation needed*]

Competition pools

[*edit*]

See: *#Dimensions (above) and Swimming (sport)#Competition pools*

Racing pool at the University of Minnesota

A simplified diagram of the FINA long course swimming pool standard, used at the World Championships and Summer Olympics

The Fédération Internationale de la Natation (FINA, International Swimming Federation) sets standards for competition pools: 25 or 50 m (82 or 164 ft) long and at least 1.35 m (4.4 ft) deep. Competition pools are generally indoors and heated to enable their use all year round, and to more easily comply with the regulations regarding temperature, lighting, and automatic officiating equipment.

An Olympic-size swimming pool (first used at the 1924 Olympics) is a pool that meets FINA's additional standards for the Olympic Games and for world championship events. It must be 50 by

25 m (164 by 82 ft) wide, divided into eight lanes of 2.5 m (8.2 ft) each, plus two areas of 2.5 m (8.2 ft) at each side of the pool. Depth must be at least 2 m (6.6 ft).^[34]

The water must be kept at 25–28 °C (77–82 °F) and the lighting level at greater than 1500 lux. There are also regulations for color of lane rope, positioning of backstroke flags (5 metres from each wall), and so on.^[34] Pools claimed to be "Olympic pools" do not always meet these regulations, as FINA cannot police use of the term. Touchpads are mounted on both walls for long course meets and each end for short course.

A pool may be referred to as fast or slow, depending on its physical layout.^[35] Some design considerations allow the reduction of swimming resistance making the pool faster: namely, proper pool depth, elimination of currents, increased lane width, energy absorbing racing lane lines and gutters, and the use of other innovative hydraulic, acoustic and illumination designs.

Pool tiles' longer rectangular edges may be parallel to the pool's long sides to help swimmers orient themselves.

Exercise pools

^[edit]

In the last two decades, a new style of pool has gained popularity. These consist of a small vessel (usually about 2.5 × 5 m) in which the swimmer swims in place, either against the push of an artificially generated water current or against the pull of restraining devices. These pools have several names, such as swim spas, swimming machines, or swim systems. They are all examples of different modes of resistance swimming.

Hot tubs and spa pools

^[edit]

Further information: Hot tub

This section **does not cite any sources**. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. (January 2018) (*Learn how and when to remove this message*)

A home spa

Hot tubs and spa pools are common heated pools used for relaxation and sometimes for therapy. Commercial spas are common in the swimming pool area or sauna area of a **health club** or fitness center, in men's clubs, women's clubs, motels and exclusive five-star hotel suites. Spa clubs may have very large pools, some segmented into increasing temperatures. In Japan, men's clubs with many spas of different size and temperature are common.

Commercial spas are generally made of concrete, with a **mosaic** tiled interior. More recently^[**when?**] with the innovation of the pre-form composite method where mosaic tiles are bonded to the shell this enables commercial spas to be completely factory manufactured to specification and delivered in one piece. Hot tubs are typically made somewhat like a **wine barrel** with straight sides, from wood such as **Californian redwood** held in place by metal hoops. Immersion of the head is not recommended in spas or hot tubs due to a potential risk of underwater entrapment from the pump suction forces. However, commercial installations in many countries must comply with various safety standards which reduce this risk considerably.

A boy relaxing in a hot tub

Home spas are a worldwide retail item in western countries since the 1980s, and are sold in dedicated spa stores, pool shops, **department stores**, the Internet, and catalog sales books. They are almost always made from heat-extruded **acrylic** sheet **Perspex**, often colored in **marble** look-alike patterns. They rarely exceed 6 m² (65 sq ft) and are typically 1 m (3 ft 3 in) deep, restricted by the availability of the raw sheet sizes (typically manufactured in Japan). There is often a mid-depth seating or lounging system, and contoured lounge style reclining seats are common.

Upmarket spas often include a drinks tray, lights, **LCD** flat-screen TV sets and other features that make the pool a recreation center. Due to their family-oriented nature, home spas are normally operated from 36 to 39 °C (97 to 102 °F). Many pools are incorporated in a **redwood** or simulated wood surround, and are termed "portable" as they may be placed on a **patio** rather than sunken into a permanent location. Some portable spas are shallow and narrow enough to fit sideways through a standard door and be used inside a room. Low power electric immersion heaters are common with home spas.

Whirlpool tubs first became popular in the U.S. during the 1960s and 1970s. A spa is also called a "jacuzzi" there, as the word became a generic after-plumbing component manufacturer; **Jacuzzi** introduced the "spa whirlpool" in 1968. Air bubbles may be introduced into the **nozzles** via an air-bleed **venturi pump** that combines cooler air with the incoming heated water to cool the pool if the temperature rises uncomfortably high. Some spas have a constant stream of bubbles fed via the seating area of the pool, or a footwell area. This is more common as a temperature control device where the heated water comes from a natural (uncontrolled heat) **geothermal** source, rather than artificially heated.

Water temperature is usually very warm to hot – 38 to 42 °C (100 to 108 °F) – so bathers usually stay in for only 20 to 30 minutes. **Bromine** or **mineral sanitizers** are often recommended as sanitizers for spas because **chlorine** dissipates at a high temperature, thereby heightening its strong chemical smell. **Ozone** is an effective bactericide and is commonly included in the circulation system with cartridge filtration, but not with sand media filtration due to clogging problems with turbid body fats.

Ocean pools

[edit]

An ocean pool at **Coogee** in Sydney, Australia

In the early 20th century, especially in Australia, **ocean pools** were built, typically on headlands by enclosing part of the rock shelf, with water circulated through the pools by flooding from tidal tanks or by regular flooding over the side of the pools at high tide. This continued a pre-European tradition of bathing in rockpools with many of the current sites being expanded from sites used by **Aboriginal Australians** or early European settlers. Bathing in these pools provided security against both rough surf and sea life. There were often separate pools for women and men, or the pool was open to the sexes at different times with a break for bathers to climb in without fear of observation by the other sex.[36] These were the forerunners of modern "Olympic" pools. A variation was the later development of sea- or harbour-side pools that circulated sea water using pumps. A pool of this type was the training ground for Australian Olympian **Dawn Fraser**.

There are currently about 100 ocean baths in **New South Wales**, which can range from small pools roughly 25 metres long and "Olympic Sized" (50m) to the very large, such as the 50 × 100 m baths in **Newcastle**. While most are free, a number charge fees, such as the **Bondi Icebergs Club** pool at **Bondi Beach**. Despite the development of chlorinated and heated pools, ocean baths

remain a popular form of recreation in New South Wales.

A semi-natural ocean pool exists on the central coast of New South Wales; it is called The **Bogey Hole**.

Infinity pools

[[edit](#)]

Image not found or type unknown

Image not found or type unknown

The **Marina Bay Sands** SkyPark Infinity Pool in **Singapore**, viewed from the poolside (left) and near the edge (right)

An **infinity pool** (also named *negative edge* or *vanishing edge pool*) is a swimming pool which produces a visual effect of water extending to the horizon, vanishing, or extending to "infinity". Often, the water appears to fall into an ocean, lake, bay, or other similar body of water. The illusion is most effective whenever there is a significant change in elevation, though having a natural body of water on the horizon is not a limiting factor.^{[\[citation needed\]](#)}

Natural pools and ponds

[[edit](#)]

Natural pools were developed in central and western Europe in the early and mid-1980s by designers and landscape architects with environmental concerns. They have recently been growing in popularity as an alternative to traditional swimming pools.^{[\[37\]](#)[\[38\]](#)} Natural pools are constructed bodies of water in which no chemicals or devices that disinfect or sterilize water are used, and all the cleaning of the pool is achieved purely with the motion of the water through biological filters and plants rooted hydroponically in the system. In essence, natural pools seek to recreate swimming holes and swimmable lakes, the environment where people feel safe swimming in a non-polluted, healthy, and ecologically balanced body of water.

Water in natural pools has many desirable characteristics. For example, red eyes, dried-out skin and hair, and bleached **swimsuits** associated with overly chlorinated water are naturally absent in natural pools.^[*citation needed*] Natural pools, by requiring a water garden to be a part of the system, offer different aesthetic options and can support amphibious wildlife such as snails, frogs, and salamanders, and even small fish if desired.

Zero-entry swimming pools

[[edit](#)]

Zero-depth entry at the **Centennial Beach** aquatic park in **Naperville, Illinois**, United States

A *zero-entry swimming pool*, also called a *beach entry swimming pool*, has an edge or entry that gradually slopes from the deck into the water, becoming deeper with each step, in the manner of a natural beach. As there are no stairs or ladders to navigate, this type of entry assists older people, young children and people with **accessibility** problems (e.g., people with a physical disability) where gradual entry is useful.

Indoor pools

[[edit](#)]

Indoor swimming pool

Indoor pools are located inside a building with a roof and are insulated by at least three walls. Built for year-round swimming or training, they are found in all climate types. Since the buildings around indoor pools are insulated, heat escapes much less, making it less expensive to heat indoor pools than outdoor pools (all of whose heat escapes).^[*39*]

Architecturally, an indoor pool may look like the rest of the building, but extra heating and ventilation and other **engineering** solutions are required to ensure comfortable humidity levels. In addition to drainage and automatic pool covers, there are a number of ways to remove the humidity present in the air in any wet indoor environment. Efficient **dehumidification** in the indoor pool environment prevents structural damage, lowers energy costs for cooling or heating, and improves the indoor climate to provide a comfortable swimming environment.^[*citation needed*]

Some colleges, universities, and high schools have buildings that use the term "natatorium" in their names, especially when the building houses more than just a swimming pool, for example a **diving** well or facilities for **water polo**. The word *natatorium* was borrowed from **Late Latin** "place for swimming" into English in New England in 1890.^[40]^[41]

Suspended swimming pool

^[**edit**]

This type of swimming pool is suspended high above the ground. A prominent example is the **Sky Pool** in London's **Embassy Gardens**, the world's first floating pool.^[42]

Other uses

^[**edit**]

Singapore Aviation Academy training pool for rescuing people on board aircraft in case of ditching

An astronaut prepares to descend into a swimming pool as part of a training exercise.

Swimming pools are also used for events such as [synchronized swimming](#), [water polo](#), [canoe polo](#) and [underwater sports](#) such as [underwater hockey](#), [underwater rugby](#), [finswimming](#) and [sport diving](#) as well as for teaching [diving](#), [lifesaving](#) and [scuba diving](#) techniques. They have also been used for specialist tasks such as teaching water-[ditching](#) survival techniques for aircraft and submarine crews and [astronaut](#) training. Round-cornered, irregular swimming pools, such as the [Nude Bowl](#), were drained of water and used for vertical [skateboarding](#).

Sanitation

[\[edit\]](#)

Main articles: [Swimming pool sanitation](#) and [Swimming pool bacteria](#)

Automated pool cleaner

Levels of bacteria and viruses in swimming pool water must be kept low to prevent the spread of diseases and pathogens. Bacteria, [algae](#) and insect [larvae](#) can breed in the pool if water is not properly sanitized. Pumps, mechanical [sand filters](#), and disinfectants are often used to sanitise the water.

Chemical disinfectants, such as [chlorine](#) (usually as a [hypochlorite](#) salt, such as [calcium hypochlorite](#)) and [bromine](#), are commonly used to kill pathogens. If not properly maintained, chemical sanitation can produce high levels of [disinfection byproducts](#). Sanitized swimming pool water can theoretically appear green if a certain amount of iron salts or [copper chloride](#) are present in the water.^[43]

[Acesulfame potassium](#) has been used to estimate how much urine is discharged by swimmers into a pool.^[44] A Canadian study estimated that swimmers had released 75 litres of urine into a large pool that had about 830,000 litres of water and was a third of the size of an [olympic pool](#). [Hot tubs](#) were found to have higher readings of the marker. While urine itself is relatively harmless, its degradation products may lead to asthma.^[44]

Covers

[[edit](#)]

Swimming pool heating costs can be significantly reduced by using a pool cover. Use of a pool cover also can help reduce the amount of chemicals (chlorine, etc.) required by the pool. Outdoor pools gain heat from the sun, absorbing 75–85% of the solar energy striking the pool surface. Though a cover decreases the total amount of solar heat absorbed by the pool, the cover eliminates heat loss due to evaporation and reduces heat loss at night through its insulating properties. Most swimming pool heat loss is through evaporation.^[45]

Winterization

[[edit](#)]

In areas which reach freezing temperature, it is important to close a pool properly. This varies greatly between in-ground and above-ground pools. By taking steps to properly secure the pool, it lessens the likelihood that the superstructure will be damaged or compromised by freezing water.^[46]

Closing vinyl and fibreglass pools

[[edit](#)]

A rolled up pool cover, used to reduce water loss from evaporation and heat loss from the pool

In preparation for freezing temperatures, an in-ground swimming pool's pipes must be emptied. An above-ground pool should also be closed, so that ice does not drag down the pool wall, collapsing its structure. The plumbing is sealed with air, typically with rubber plugs, to prevent cracking from freezing water. The pool is typically covered to prevent leaves and other debris from falling in. The cover is attached to the pool typically using a stretch cord, similar to a [bungee cord](#), and hooks fitted into the pool surround. The skimmer is closed off or a floating device is placed into it to prevent it from completely freezing and cracking.

Floating objects such as life rings or [basketballs](#) can be placed in the pool to avoid its freezing under the cover. Sand or DE filters must be backwashed, with the main drain plug removed and

all water drained out. Drain plugs on the **pool filter** are removed after the filter has been cleaned. The pool pump motor is taken under cover. Winter chemicals are added to keep the pool clean. The innovation of a composite construction of fiberglass, with an epoxy coating and porcelain ceramic tiles has led to the pre-form, composite-type with significant advantages over older methods; however, it also has increased sensitivity to metal staining.^[*citation needed*]

In climates where there is no risk of freezing, closing down the pool for winter is not so important. Typically, the thermal cover is removed and stored. Winter sunlight can create an algae mess when a cover that has been left on all winter is removed. The pool is correctly **pH**-balanced and super-chlorinated. One part algaecide for every 50,000 parts of pool water should be added, and topped up each month. The pool should be filtered for one to two hours daily to keep the automated chlorination system active.^[*citation needed*]

Safety

[*edit*]

Lifeguard at a **Hong Kong** swimming pool

Pools pose a risk of **drowning**, which may be significant for swimmers who are inexperienced, suffer from **seizures**, or are susceptible to a heart or respiratory condition. **Lifeguards** are employed at most pools to execute water rescues and administer **first aid** as needed in order to reduce this risk.

Diving in shallow areas of a pool may also lead to significant head and neck injuries; diving, especially head-first diving, should be done in the deepest point of the pool, minimally 2.4 m (7 ft 10 in), but desirably 3.7 m (12 ft), deeper if the distance between the water and the board is great.

Pools present a risk of death due to drowning particularly in young children. In regions where residential pools are common, drowning is a major cause of childhood death. As a precaution, many jurisdictions require that residential pools be enclosed with **fencing** to restrict unauthorized access. Many products exist, such as removable baby fences. The evidence for floating alarms and window/door alarms to reduce the risk of drowning is poor.^[47] Some pools are equipped with computer-aided **drowning prevention** or other forms of electronic safety and security systems.

Suspended ceilings in indoor swimming pools are safety-relevant components. The selection of materials under tension should be done with care. Especially the selection of unsuitable stainless steels can cause problems with **stress corrosion cracking**.^[48]

Dress code

[[edit](#)]

Further information: [Mixed bathing](#)

In public swimming pools, dress code may be stricter than on public beaches, and in indoor pools stricter than outdoor pools. For example, in countries where women can be topless on the beach, this is often not allowed in a swimming pool, and a swimsuit must be worn. For men, wearing ordinary shorts and a T-shirt to go in the water at a beach may be considered acceptable, but pools usually require real [swimsuits](#) or other dedicated water wear as swimming with regular clothes can potentially weigh a swimmer down should they need to be rescued. In France and some other European countries, [board shorts](#) are usually not allowed for "hygienic" reasons. In [Nordic countries](#), in particular [Iceland](#), rules about clothing and hygiene are especially strict.^[49] When diving from a high board, swimsuits are sometimes worn doubled up (one brief inside another) in case the outer suit tears on impact with the water.

About backyard

For other uses, see [Backyard \(disambiguation\)](#).

Look up ***backyard*** or ***back yard*** in Wiktionary, the free dictionary.

 The examples and perspective in this article **may not represent a worldwide view of the subject**. You may [improve this article](#), discuss the issue on the [talk page](#), or [create a new article](#), as appropriate. *(January 2025)* ([Learn how and when to remove this message](#))

A small square icon with a diagonal cross, indicating a missing image.

A back yard in [Brisbane, Queensland, Australia](#), in 1929

The back garden of [Iford Manor](#) was designed by [Harold Peto](#).

A **backyard**, or **back yard** (known in the United Kingdom as a **back garden** or just **garden**), is a **yard** at the back of a **house**, common in suburban developments in the Western world.[1]

It is typically **residential garden** located at the rear of a property, on the other side of the **house** from the **front yard**. While Western gardens are almost universally based on plants, the "garden" (which etymologically may imply a shorthand of **botanical garden**) may use plants sparsely or not at all. Hence, the terms *yard* and *garden* are for the context of this article interchangeable in most cases.

History

[[edit](#)]

United Kingdom

[[edit](#)]

In English **suburban** and **gardening** culture, back gardens have a special place.[2] In **Britain** there are over 10 million back gardens.[3] British planning require minimum distances between the rear faces of adjacent dwellings and so there is usually space for a back garden of some sort. In other countries, such as Australia, this does not apply and preference for buildings with a large footprint has tended to squeeze out the space at the rear.[4]

Australia

[[edit](#)]

In Australia, until the mid-20th century, the back yard of a property would traditionally contain a **fowl run**, outhouse ("dunny"), **vegetable patch**, and **woodheap**. More recently, these have been replaced by outdoor entertainments such as a **barbecue** and **swimming pool**.^[5] But, since the 1990s, the trend in Australian suburban development has been for back yards to disappear as the dwellings now occupy almost all of the building plot.^[1]

In higher latitudes, it is economical in low **land value** regions to use open land surrounding a house for **vegetable gardening** during summers and allow sunlight to enter house windows from a low horizon angle during winters. As land value increases, houses are built nearer to each other. In order to preserve some of the open land, house owners may choose to allow construction on the side land of their houses, but not build in front of or behind their house in order to preserve some remnants of open surrounding land. The back area is known as the backyard or **back garden**.

Overview

[[edit](#)]

A back garden arises when the main building divides the surrounding gardens into two. This happens especially in the high density housing of British cities and towns. A **semi-detached house** typical of the British suburbs of the 20th century will have front gardens which face the road and provide access. The back gardens in such cases will be more secluded and access will typically be via the dwelling or by a path around the side. A front garden is a formal and semi-public space and so subject to the constraints of convention and law. However, the back garden is more private and casual,^[6] and so can be put to more purposes.

If the housing is **terraced**, then no side path is possible and access may be provided by an alley which runs behind the rear of the terrace. While buildings opening directly onto a street may not have a front garden, most will have some space at the back, however small; the exception being **back-to-back houses** found in northern industrial towns in England such as **Leeds**, but now mostly demolished. A private back yard with a "privy" (toilet) was a defining feature of the **byelaw terraced house**, a type of dwelling built to comply with the **Public Health Act 1875**.

Usage

[\[edit\]](#)

Because of weather constraints, it is usual to use a garden more in the summer than in the winter, although some usages are traditional, such as for a bonfire on **Bonfire Night**, 5 November. Similarly, **daytime** usage is more common than nighttime.

The back garden of the **archdeacon of Canterbury** contains a **mulberry** which is said to have been planted by **Erasmus**.

Functionally, it may be used for:

- Growing food^[3]
- Playing games
- Relaxing and **sunbathing**
- Raising plants
- Housing pets
- Drying clothes
- Making a **compost heap**
- Hobbies
- Locating a **greenhouse**, **conservatory**, **shed**, **workshop**, **outhouse**, or **garage** (if access to a **road** is possible)

- Partying
- Wildlife refuge
- Safe area for children
- Location of an **air raid shelter** such as the **Anderson shelter** of World War II^[7]

In fact, its functional and **recreational** use is so varied, that it cannot be easily categorised. Many of the freedoms of the use of the back garden come from the restrictions, social or legal of what are not done in the front.

Usually, clothes are not dried, vegetables are not grown, and sunbathing is not carried out in a front garden. All these can happen in the privacy of the back garden.

Traditionally, people treat a back garden as private to themselves, and not those they are neighbours to. The social etiquette of how one can greet and interact one's neighbours may be complex and defined by many informal social rules.

In some areas, talking to one's neighbours over the back wall (the side wall following the property boundary line) is usual, and is a welcome form of neighbourliness, while in other places it is not.

Reviews for Rock N Block - Turf N Hardscapes

found or type unknown

Terry lewis

(5)

Workers were great, no problem they did what was required, but the representative of your company mislead me on what was to be done, I showed pictures from a competitor landscaper, representative stated he could bet there , , . price, but since it wasn't in contract, I was left with uncomplicated backyard , working with owner at present, so he's been outstanding working on this situation, as amount of rock was way off and the owner did increase the amount substantially to finish the front yard. another landscaper under contract to finish the backyard. Would like to add a comment the manger/owner of Las Vegas yard n block stands behind his words and helped me tremendously on finishing up the backyard,

Eric and team did an amazing job. They worked with me for months while I got HOA approval for the project. Once they began working they were great, going over everything in detail and making sure things were perfect. This project included wall repair, stucco and paint repair, paver and turf installation. Extremely satisfied with this experience.

Shana Shapiro

Chris, the design consultant, Dave the production manager, along with their install team Opulent were affordable, upfront with costs, efficient and professional. Attached are some before and after pictures. Highly recommend their services.

Dawna OgleYohe

My initial contact was with Ray, whom did an excellent job giving me an estimate on what I wanted done in my small yard and walkway., the guys that came out and did the work were superior. They did an excellent job. I'm very pleased with this company. I will highly recommend them to family and friends, and I will be using them in the near future for other little projects.

Reviews for Rock N Block - Turf N Hardscapes

D. Lopez

(5)

We recently had a very positive experience with Rock N Block for our fence replacement. The entire process went smoothly and exceeded our expectations. Harvey and his team were incredibly professional and communicative throughout the project providing much-needed assurance and peace of mind. The crew was punctual and maintained a diligent and respectful attitude that made the experience pleasant. The crew finished the project ahead of schedule, and the quality of their work is impressive; our new wall looks great! We recommend Rock N Block for any fencing needs and look forward to working with them again. Thank you, Harvey and crew, for a job well done!

Workers were great, no problem they did what was required, but the representative of your company mislead me on what was to be done, I showed pictures from a competitor landscaper, representative stated he could bet there , , . price, but since it wasn't in contract, I was left with uncomplicated backyard , working with owner at present, so he's been outstanding working on this situation, as amount of rock was way off and the owner did increase the amount substantially to finish the front yard. another landscaper under contract to finish the backyard. Would like to add a comment the manger/owner of Las Vegas yard n block stands behind his words and helped me tremendously on finishing up the backyard,

My initial contact was with Ray, whom did an excellent job giving me an estimate on what I wanted done in my small yard and walkway., the guys that came out and did the work were superior. They did an excellent job. I'm very pleased with this company. I will highly recommend them to family and friends, and I will be using them in the near future for other little projects.

Eric and team did an amazing job. They worked with me for months while I got HOA approval for the project. Once they began working they were great, going over everything in detail and making sure things were perfect. This project included wall repair, stucco and paint repair, paver and turf installation. Extremely satisfied with this experience.

Frequently Asked Questions

What are the benefits of installing artificial grass?

Artificial grass provides a lush, green lawn year-round with minimal maintenance, reduces water usage, and is durable under various weather conditions.

What are the benefits of artificial turf in Las Vegas landscapes?

Artificial turf saves precious water, cuts down on fertilizer or pesticide use, and requires no mowing—ideal in a desert city. It stays green year-round despite scorching summer highs. Many modern turf products feature realistic textures that mimic natural grass, making them family- and pet-friendly. With proper installation—like ensuring efficient drainage and a smooth sub-base—synthetic lawns can last years with minimal upkeep. Pairing artificial turf with surrounding gravel or drought-tolerant plants creates visual contrast and reduces the “heat island” effect. While initial costs may be higher, homeowners often recoup that investment quickly by slashing water bills and maintenance routines.

What services does Rock N Block Turf N Hardscapes offer?

Rock N Block provides comprehensive solutions including artificial turf supply and installation, hardscaping services, paver installation, retaining walls, outdoor living spaces, and more.

How do I choose the right landscaping designer in Las Vegas?

Begin by checking portfolios to see if a designer's style resonates with you—some focus on modern rockscapes, while others excel in lush desert gardens. Ask for references and read online reviews from past clients. Confirm they understand desert-friendly concepts like drip irrigation, suitable plant species, and local water restrictions. It's helpful if they have experience navigating HOA rules or city permits. Request detailed estimates outlining costs for plants, irrigation, and labor. A trustworthy designer will listen to your needs—like budget constraints or favorite colors—and propose feasible solutions. Look for open communication and transparent timelines, ensuring a smooth path from initial concept to a vibrant, low-water yard.

How can I conserve water while keeping my yard attractive in Las Vegas?

Start by practicing **xeriscaping**—selecting native or desert-friendly plants, then organizing them into zones based on watering demands. Swap water-heavy turf for artificial grass or decorative rock and limit any remaining lawn areas to spaces you truly use. Install drip irrigation lines to deliver moisture directly to roots, minimizing evaporation. Add mulch or gravel around plants to help the soil retain water. Smart irrigation controllers detect weather changes and adjust schedules automatically, avoiding wasted runoff. Lastly, consider strategic shade via pergolas or drought-tolerant trees to reduce heat stress on plants. These measures collectively maintain a vibrant look with far less water.

Does Rock N Block offer commercial artificial turf solutions?

Yes, they provide cost-effective and practical artificial turf solutions tailored for commercial properties.
